EDUCATION

- **Washington University** St Louis, MO
PhD (In Progress), Molecular Genetics and Genomics Aug. 2014 – Present
- **University of Iowa** Iowa City, IA
BS, Microbiology and Informatics; GPA: 3.8 Aug. 2009 – May. 2014

EXPERIENCE

- **The McDonnell Genome Institute, Washington University** St Louis, MO
Graduate Research Scientist, Ira Hall Lab, Computational Genetics Feb 2015 - Present
 - **Distributed Computing, Bioinformatics:** Leveraging a high-performance distributed computing cluster to process population-scale genome sequencing data, improving our understanding of the causes and consequences of structural variation in human genomes. Most work is done in a Linux environment with custom Bash pipelines, often using bioinformatics tools combining Bayesian statistics and machine learning approaches.
 - **Single-cell Sequencing:** Developing novel computational and molecular biology methods to sequence the genomes of single mammalian neurons in collaboration with The Scripps Research Institute at University of California, San Diego. (Processing up to 10 TB of raw Illumina sequencing data within a 36 hour period.)
 - **Teaching Assistant:** Advised students in characterizing the genome sequences of novel bacteriophages. Hands-on computer lab course using a series of bioinformatics tools to identify genes and predict their function, as well as classifying unknown phages into existing phylogenetic groups.
- **University of Iowa** Iowa City, IA
Undergraduate Research Fellow, Adam Dupuy Lab, Cancer Genetics Aug 2010 - May 2014
 - **Genome Editing:** Designed methods for viral genetic engineering in mouse models of human cancers and a sequencing method for detecting resulting transgene insertions.
 - **Bioinformatics:** Processed high-throughput genome sequencing data using Linux bioinformatics tools followed by ad-hoc statistical analyses and data visualization in Python and R.

RELEVANT INTERESTS

Data science, distributed computing, data visualization, bioinformatics, genetics. I enjoy learning new technologies and tinkering with complex systems. After several years of genetics and bioinformatics training in academia, I am currently seeking industry experience with specific interests in data science and software engineering.

PROGRAMMING SKILLS

- **Languages:** Bash, Python, R (ggplot), awk, SQL, C++, JavaScript, HTML, PHP, L^AT_EX
- **Technologies:** Linux/Unix, OSX, sed, git, Docker, high-performance distributed computing (IBM Platform LSF, Oracle Grid Engine)
